PROFESSIONAL SUMMARY

MCA candidate specialising in Data Analytics with hands-on project experience across retail, telecom, e-commerce, and manufacturing domains. Proficient in SQL, Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), Power BI (DAX, Power Query), Tableau, and Excel. Skilled in EDA, predictive modelling, dashboard development, KPI reporting, and translating raw datasets into actionable business insights for stakeholder reporting.

TECHNICAL SKILLS

Languages: Python | SQL

Libraries: Pandas | NumPy | Scikit-learn | Matplotlib | Seaborn

BI & Visualisation: Power BI (DAX, Power Query) | Tableau | Microsoft Excel (Pivot Tables, Charts, Advanced Formulas)

Databases: MySQL — Joins, Window Functions, Aggregations, Subqueries, Query Optimisation

Analytics: EDA | Data Cleaning | Predictive Analytics | Regression Analysis | Feature Engineering | Trend Analysis

Reporting: KPI Reporting | Dashboard Development | Stakeholder Reporting | Reporting Automation

Tools: Git | GitHub | Jupyter Notebook | VS Code

PROJECTS

Retail Sales Analytics Dashboard | SQL · Power BI · Excel Mar 2026

- Built an end-to-end retail analytics solution integrating SQL, Power BI, and Excel for unified reporting.
- Designed interactive dashboards tracking **Sales, Profit, Orders, and Margin** KPIs across product categories and regions.
- Identified low-profit/high-sales products and seasonal trends, enabling data-driven procurement decisions.

Telco Customer Churn Prediction | Python · Scikit-learn · ML Feb 2026

- Performed comprehensive EDA on telecom dataset; engineered features to improve model performance.
- Built Logistic Regression and Random Forest classifiers; evaluated using **ROC-AUC, recall, and confusion matrix**.
- Generated actionable customer retention strategies based on churn probability scores and feature importance analysis.

Customer Churn Analysis & Prediction | Python · Excel Feb 2026

- Analysed **7,043+** customer records to identify churn drivers including contract type, tenure, and billing method.
- Built Logistic Regression model achieving **80% recall and AUC of 0.83**; interpreted feature contributions for business explainability.
- Created Excel dashboards and customer retention recommendations for stakeholder reporting.

E-Commerce Sales Analytics | SQL · MySQL Jan 2026

- Performed deep-dive SQL analysis using JOINS, window functions, and aggregations on a multi-table e-commerce schema.
- Identified that repeat customers contribute **40% of total revenue**, informing loyalty programme strategy.
- Delivered a business insights report covering revenue growth levers, customer segmentation, and retention metrics.

Manufacturing Telemetry Analysis | Tableau Jan 2026

- Built Tableau dashboards monitoring machine downtime, OEE, and operational efficiency across production lines.
- Identified **top 3 machine failure sources** and performance bottlenecks, supporting preventive maintenance planning.

INTERNSHIP EXPERIENCE

Python Flask Intern

Jan 2025

- Developed backend REST APIs using Python Flask with MySQL database integration and full CRUD operations.
- Worked with structured datasets and API endpoints; gained hands-on experience in data pipeline flow and backend logic.

EDUCATION

Master of Computer Applications (MCA) — Pursuing

LEAD College (Autonomous), Palakkad, Kerala

Bachelor of Computer Applications (BCA)

2025

Mar Osthatheos College, Perumpilavu, Kerala

CERTIFICATIONS

- Deloitte Australia – Data Analytics Virtual Experience (Forage)
- Tata – GenAI Powered Data Analytics Job Simulation (Forage)
- Introduction to SQL – Simplilearn
- Power BI for Beginners – Simplilearn
- Introduction to Data Science – Cisco Networking Academy
